

'm guessing what you are really trying to find out is if it came from one of the models with the higher strength ratings, Like the Monte SS, Buick GNX, Olds 442.

Buick units are identified by the BQ or BRF transmission codes. Monte Carlos used the CZF code. The Hurst Olds/4-4-2 units had a KZF or an OZ code.

Any other code (KJF, TKM) was a standard build.

Hemmings also lists the following decoding info:

1st digit: month of production (A through M, skipping the letter "I")

2nd-3rd: production day of the month

4th: shift transmission was produced (1st-3rd shift)

5th: assembly plant (T: Three Rivers, MI; J: Windsor, Canada; W: Warren, MI)

6th-7th: decade and year

8th-9th: or 8th-10th: transmission ID code

10th-13th: or 11th-14th: transmission serial number

While that info is oversimplified and the second tranny (yellow tag) seems to have some conflicting info (like NO production shift, which could result from OT weekend, or labor trouble) it still seems to be from a 1982 Oldsmobile. The first one is so far off I think it would be a good idea to look at the pan and make sure it's really a 200-4R

bought it}.
